

Sprint Report Example

Steve Thorpe

Sprint Report Example

The sprint reports were produced using our Kanban board software JIRA. They provide a full list of the of the completed and outstanding tickets left at the end of each sprint, with the length of each sprint being defined by the Software and Development manager. As we are unable to give further access to our JIRA board (we only have 10 licenses) this document is an example of the sprint documentation that was produced and was used to review our progress within the project.
